```python
inventory = {}

while True:
    print("1.Add 2.View 3.Exit")
    ch = input("Enter choice: ")

    if ch == '1':
        name = input("Name: ")
        number = int(input("Number: "))
        inventory[name] = number

    elif ch == '2':
        print(inventory)

    elif ch == '3':
        break

    else:
        print("Invalid")
```
